DATA ANALYST

Data Analyst with expertise in Python, SQL, and Databricks, building end-to-end ML and ETL pipelines and clinical KPI frameworks in regulated healthcare and neuroscience environments. Proven 60% workflow efficiency gain and 7% loss reduction across HIPAA-compliant data operations.

EDUCATION

Bachelor of Science, Mathematics - University of California, San Diego

CERTIFICATIONS

Associate Data Engineer Certification – DataCamp

Data Engineering Professional Certification – DeepLearning.AI

PROJECTS

EEG Treatment Outcome Prediction - Python, scikit-learn, Databricks | Wave Neuroscience, 2025

Built and benchmarked regression models (Elastic Net, Lasso, Ridge) on PCL-5 clinical outcome data using k-fold cross-validation to identify key predictors of neurological treatment response.

SKILLS

Languages: Python, SQL, R, Java, Spark, MATLAB

Libraries: Pandas, NumPy, scikit-learn, PyTorch, Pingouin, Seaborn

Tools: Databricks, Advanced Excel, Power BI, Tableau, Git, Agile/Scrum

Statistical Analysis: Hypothesis Testing, Regression Analysis, Stakeholder Presentations

PROFESSIONAL EXPERIENCE

WAVE NEUROSCIENCE – Newport Beach, CA

February 2025 to Present

DATA ANALYST, DEPARTMENT OF DATA SCIENCE

- Increased daily report output by 60% by optimizing analytical workflows and KPI tracking, improving data delivery efficiency for clinical and research stakeholders.
- Engineered feature extraction pipelines on EEG time-series data to quantify treatment outcomes for 100+ patients, improving signal interpretability and model input quality for neurological event detection
- Built and benchmarked predictive models on PCL-5 outcome data using k-fold cross-validation across Elastic Net, Lasso, and Ridge regression identifying 2 key clinical predictors of treatment response
- Led migration to a Databricks-based medallion architecture, designing scalable ETL pipelines to transform raw EEG data into structured, analysis-ready datasets.
- Leveraged PySpark and SQL to automate weekly report generation on key performance metrics across teams.
- Partnered with data scientists, statisticians, and clinical leadership to translate model outputs into actionable treatment insights, directly supporting research publications / operational decisions

INLAND EMPIRE HEALTH PLAN – Rancho Cucamonga, CA

March 2024 to November 2024

INTERN, FINANCIAL COMPLIANCE

- Built a Python (pandas, scikit-learn) probabilistic risk-scoring model to classify transaction-level fraud likelihood across a claims dataset of 300,000 records, augmenting the existing manual audit process
- Applied linear algebra-based rate optimization techniques to IPA contract performance analysis, reducing projected losses by 7% in healthcare contracts
- Collaborated with external ML partners to evaluate advanced analytics applications for claims processing and transportation data, producing a comparative analysis of 7 vendor approaches
